Input sought on Veteran Wellbeing Support Services in Tasmania

Input from Tasmanian veterans, their families and service providers is being sought about service gaps and the best way to provide long-term benefits to the veteran community through a potential new service model.

University of Tasmania researchers are conducting the feasibility study and are seeking feedback and opinions from key stakeholders to help inform future decisions around service delivery for Tasmanian veterans and their families.

The researchers want to hear from Tasmanian veterans and their family members, ex-service organisations and other providers of services to veterans or their family members. The study is also looking at any overlap with services for first responders so would also like to hear from Tasmanian first responders and service providers.

“We are keen to hear from anyone who feels they have something to say about these support services, and you can contribute by filling out the online survey, attending a co-design workshop or a Zoom meeting,” research project lead Professor Christine Stirling said.

More information about the study, and ways to participate, email Veteran.Consultation@utas.edu.au or visit the study’s website here

The Tasmanian Feasibility study for Veteran Wellbeing Support Services is jointly funded by the Department of Veterans’ Affairs and the Department of Communities Tasmania.
